Description

EDEA/ CRAZY Power Wedges are recommended to be installed between the upward Curve at the front of the Skating Boot and the flat skate plate to keep the foot in its Natural Position and to NOT Deform the Boot. The biggest advantage of the Power Wedge is that it provides a VERY secure CONTACT between the Boot and Frame, this gives much more Power to each push and stroke, thus the name POWER WEDGE. White Nylon plastic set of 2.

Note: When installing the Power Wedges, the side with the Hollow goes towards the plate and the smooth side mounts towards the boot. This

allows the stoppers to be fully screwed up into the plate as close as necessary.
