Description

The Roll-Line Energy Titanium is the plate used by the best skaters in the world! Featuring 7mm axles made from the strongest and lightest titanium alloy available, ultra-lightweight construction and trucks with adjustable pivot pins. Provides the most sensitive control, the greatest and absolute fastest response available from any plate! The Roll-Line Energy Titanium is forged from a solid bar of Eragal Aluminum Alloy and completely CNC machined. Eragal is one of the Strongest and Lightest Aluminum Alloys available and has a lower expansion coefficient and offers the best coiled-spring response. The Energy Titanium uses the Roll-Line click action adjustment system with 04 series, 13mm base king pins, adjustment click-nuts and locking screws. Choose standard, natural rubber or urethane suspensions, in your choice of hardness. Choose from three available toe stops. Plates are sized according to wheelbase measurement (from centre of front axle to centre of rear axle) from 120mm to 210mm. If you aren't sure, please ask for advice on selecting the right size for your needs!
